The Honorable Julia Letlow  
U.S. House of Representatives  
142 Cannon House Office Building  
Washington, DC 20515

The Honorable Kim Schrier  
U.S. House of Representatives  
1110 Longworth House Office Building  
Washington, DC 20515

Dear Representative Castor, Representative Letlow, and Representative Schrier:

The undersigned childhood cancer organizations are members of the Alliance for Childhood Cancer, consisting of patient advocacy groups, healthcare professionals and scientific organizations, representing Americans who care deeply about childhood cancer. We are writing to offer our endorsement of H.R. 3633, the PREVENT HPV Cancers Act, which would raise awareness about the human papillomavirus (HPV) and HPV-related cancers.

Each year in the U.S. an estimated 16,000 children are diagnosed with cancer. Approximately 1 in 263 children in the U.S. are diagnosed with cancer before their 20th birthday. Overall, incidence rates from 2010 through 2019 have stabilized in children after increasing since 1975 but continued to rise in adolescents by 1% per year, although trends vary by cancer type. Unfortunately, cancer remains the most common cause of death by disease for children in America.

Together, we have made significant advances to develop better treatments for many forms of childhood cancer. However, for too many children, progress is limited and there is no available cure. Unfortunately, 1 in 5 children diagnosed with cancer in the U.S. will not survive, and for the ones who do, the battle is never over. By the age of 50, more than 99% of survivors have had a chronic health problem, and 96% have experienced a severe or life-threatening condition caused by the toxicity of the treatment that initially saved their life, including brain damage, loss of hearing and sight, heart disease, secondary cancers, learning disabilities, infertility and more.

Childhood cancer survivors are at risk for developing secondary cancers, making efforts in cancer prevention and awareness especially important for their long-term health. According to the Centers for Disease Control and Prevention (CDC), HPV causes approximately 36,000 cases of cancer in the United States each year, accounting for 3% of all cancers in women and 2% of all cancers in men. The PREVENT HPV Cancers Act would create a national HPV awareness campaign to educate providers, parents, and the public about HPV and the HPV vaccine. The

legislation also reauthorizes the National Breast and Cervical Cancer Early Detection program to ensure timely access to cervical cancer screenings and diagnostic services. Cancer prevention and awareness programs are important for childhood cancer survivors after treatment.

Thank you for your work on behalf of children, adolescents, and young adults with cancer. The Alliance for Childhood Cancer looks forward to working together on this innovative endeavor. Please contact Sarah Milberg, Co-Chair of the Alliance for Childhood Cancer, at [smilberg@allianceforchildhoodcancer.org](mailto:smilberg@allianceforchildhoodcancer.org) or Dr. Michael Link, Co-Chair of the Alliance for Childhood Cancer, at [mink@stanford.edu](mailto:mink@stanford.edu) for any additional information.

Sincerely,

**The Alliance for Childhood Cancer**
